

NDU016SR – Graduation Rate Survey –Report

Logic –

This first starts the Stdapi-Init Procedure. Then it starts the init-report where it gets the user input for the Session/Term. Then this program performs the init_arrays Procedure where it creates an array to hold cohort information. At this point it runs the create_citizenship_sql procedure. Then it performs the Create_sport_sql procedure to define a sql string which will be used to generate a sports table. Imbedded in the sql is the priority for extracurricular sports. Then it performs the create_150_limits_for_cohrt to generate the cutoff dates for completion of degrees within 150% of normal time. At this point it performs the process_records_section procedure where it Query's the database tables Student_CONS_STAT, Academic Program, Academic Plan, Academic Plan Table, NDU Legacy_SRTK, Personal Data, Diversity, and process returned record data. Legacy information is given priority over PSoft info at this time. Information common to both legacy and PSoft are extracted here. The sport, Degree completion date, Degree award, and Athletic info will be obtained by the procedures get_legacy_data and get_peoplesoft_data for legacy and PSoft. Then it performs the process_section_5 procedure to determine the number of students receiving athletic aid. Then it performs the display_sections procedure that outputs processed data for each section. After this it performs the write_parameters_used procedure to write parameters used from the run-control record and their values. This procedure should be called prior to reset. Then this program performs the Reset procedure to reset the variables used to determine cohort placement. After this it performs the Stdapi-Term procedure and then ends the report.
